## **Section 1 – Introduction & IPR**

This Training Specification has been developed to facilitate delivery of the programme objectives and provide information regarding the installation of energy efficiency measures to Traditional (pre-1919) Buildings.

Suitable Training Providers are invited to apply to CITB (as described in Section 3.9) to offer the training programme in the formats described in this document. The course material, Intellectual Property Rights and Copyright are the property of CITB and no part of this and the associated Course Handbook can be reproduced or used without written permission from CITB.

Training Providers who wish to deliver the Energy Efficiency & Retrofit of Traditional (pre-1919) Buildings training programme must apply to and obtain a signed and dated Service Level Agreement from CITB (as shown in section 3.1) to offer this programme.

The programme has been accredited by the Scottish Qualification Authority (SQA) for the Certification of Learners and comprises of the three Units listed below. A Key aspect of the programme also includes a requirement for an initial assessment of each learner's prior knowledge and experience in this area of construction and completion of the Level 3 SQA End Assessments or Assignments.

The course training objectives are therefore linked directly to the three Units that make up the Level 3 Award for Energy Efficiency Measure for Older and Traditional Buildings (QCF) and which are listed below:-

- **SQA Code H6MK 69 Older & Traditional Buildings: Age, Nature and Characteristics**
- **SQA Unit code H6MM 69 Older and Traditional Buildings: Assessing Options for the Introduction of Energy Efficiency Measures**
- **SQA Code H6MN 69 Older and Traditional Buildings: Making Recommendations and Giving Advice on the Introduction of Energy Efficiency Measures**

In addition, supplementary information to support learners understanding of the broader issues affecting the Energy Efficiency and Retrofit of pre 1919 Traditional Buildings is provided in the form of a course handbook that integrates and broadly covers the subject areas below:-

- Understanding the chronology, building styles, age and characteristics of Traditional (pre-1919) buildings and Understanding how the thermal performance and energy and efficiency of Traditional (pre-1919) Buildings are assessed.
- Understanding the impact of the Installation of retrofit of energy efficiency measures to Traditional (pre-1919) Buildings and Installation of Energy Efficiency Measures in relationship to Craft Occupations.
- Understanding the range of available energy efficiency systems and measures available

### **Intellectual Property Rights (IPR)**

The Intellectual Property Rights (IPR) and copyright for the materials within this document are the property of CITB unless otherwise stated and cannot be re-produced without the prior written consent from CITB. © 2015 CITB

## Section 2 - Training Aims & Objectives

### 2.1 Training Programme Aims

The overarching aim of the training programme is to enable people to recognise and understand the knowledge, skills and materials associated with the installation and retrofit of energy efficiency measures to traditional (pre-1919) Buildings. The programme also aims to ensure that a learner's prior knowledge and experience of this arena is established ahead of the course delivery and is therefore, designed principally for individuals with experience of working in the construction industry. Learners are subsequently required to pass meet the assessment criteria for the SQA Level 3 Award in Energy Efficiency Measure for Older and Traditional Buildings (QCF) SQA Code: GJ32 69: Qualification Code 601/2659/0 by completion of an end assessment or assignment to confirm their understanding of the subject areas

### 2.2 Intended Audience

This training programme is principally designed for persons who are aged 18 years of age or older and who already have a background and experience in the construction industry .however learners who are new to the installation of energy efficiency retrofit measures applied to traditional (pre-1919) buildings can be considered and their suitability assessed for the programme. The programme is also designed for learners to obtain a recognised qualification in energy efficiency.

*The target audience includes the following occupational areas but the list shown is not exhaustive:*

- Experienced craftspeople & general building operatives
- Proprietors of small (jobbing) building companies who have experience of working on various aspects of traditional (pre-1919) buildings, or plan to undertake this type of work
- Site managers and supervisors involved in managing contracts for the energy efficiency & retrofit of traditional (pre-1919) buildings
- Estimators, planners architects, designers
- Installers of Solid Wall Insulation systems (Internal & External Wall Insulation)
- Installers of Passive Fire Protection measures.

### 2.3 Training Delivery Options

As part of the approval process to offer the programme, training providers must confirm in their application, the training delivery options they wish to use from the list below and provide details of the programme structure and content:

- 2 Day programme (comprising of a minimum of 12 hours) designed for learners with some prior knowledge of energy efficiency measures and documented evidence of their experience and who wish to obtain a relevant qualification
- 3 Day programme. (18 Hours) which covers the three SQA Units in greater detail and may include a site visit to a suitable traditional (pre-1919) building to illustrate key learning issues in situ
- 5 Day Programme designed for those who have only a basic understanding of energy efficiency measures and traditional (pre-1919) buildings
- The Programme can also be completed on a part-time basis using the minimum module delivery times provided or as an e-Learning package via distance learning, webinars using assignments and on line end assessments.

## 2.4 CITB Grant Support

Grant support via short duration on a Company Training Plan is available for daily attendance on the programme for employers, their employees and their named Labour Only Sub-contractors (LOSC) registered with and in scope to CITB. Training providers and employers must ensure that confirmation of available grants is obtained from CITB prior to commencement of the training programme. It should not be assumed that grants at what level are available.

## 2.5 Details of the SQA Level 3 Award for Energy Efficiency Measure for Older and Traditional Buildings (QCF)

### Qualification structure for SQA Level 3 Award for Energy Efficiency Measures for Older and Traditional Buildings (QCF)

**SQA Qualification Code: GJ32 69**

**Ofqual Qualification Code: 601/2659/0**

To attain the qualification, learners must achieve a total of 3 credits.

This comprises:

- ◆ 3 Mandatory credits

**Please note:** It is important that the SQA Unit codes are used in all your recording documentation and when your results are communicated to SQA.

**Mandatory Units: Learners must achieve 3 credits**

SQA Unit Code	Title	Ofqual Unit code	QCF Level	QCF credit value	GLH
H6MK 69	Older and Traditional Buildings: Age, Nature and Characteristics	M/505/3506	69	1	7
H6MM 69	Older and Traditional Buildings: Assessing Options for the Introduction of Energy Efficiency Measures	T/505/3507	69	1	7
H6MN 69	Older and Traditional Buildings: Making Recommendations and Giving Advice on the Introduction of Energy Efficiency Measures	R/505/3650	69	1	7

*See overleaf for details of the above units.*

## 2.6 QCF Units & Assessment Specification

Unit Title	<b>Older &amp; Traditional Buildings: Age, Nature and Characteristics</b>
Ofqual Code	<b>M/505/3506</b>
SQA Code	<b>H6MK 69</b>
SSC Ref	<b>OTB1</b>

### QCF Unit Specification

Title	<b>Older &amp; Traditional Buildings: Age, Nature and Characteristics</b>	
Level	<b>3</b>	
Credit Value	<b>1</b>	
<b>Learning Outcomes The Learner will</b>	<b>Assessment Criteria The learner can:</b>	
1 Know the age and construction of older and traditional buildings.	1.1 Estimate the age of a building.  1.2 Explain the heritage values and significance of older and traditional buildings.  1.3 Identify the materials and construction methods used in older and traditional buildings with specific reference:- <ul style="list-style-type: none"> <li>• roofs</li> <li>• walls</li> <li>• floors</li> <li>• doors and windows</li> <li>• chimneys and fireplaces</li> </ul> 1.4 Explain how conservation principles are applied to older and traditional buildings.  1.5 Identify local and regional variations of traditional buildings and materials.  1.6 Clarify the circumstances where referral to a specialist or recommendation for further analysis or investigation would be appropriate.	
2 Be able to identify the factors which influence how older and traditional buildings perform and the implications for the introduction of energy efficiency measures.	2.1 Identify the way older and traditional buildings perform with specific reference to: <ul style="list-style-type: none"> <li>• how the performance of traditionally constructed buildings differs to modern construction</li> <li>• the breathability and permeability characteristics of traditional building fabric</li> <li>• the geographical location, aspect, orientation and the differing exposure of individual elevations</li> </ul>	
<i>continued</i>	<i>continued</i>	

<b>Learning Outcomes</b> <b>The learner will:</b>	<b>Assessment Criteria</b> <b>The learner can:</b>
<p>2 Be able to identify the factors which influence how older and traditional buildings perform and the implications for the introduction of energy efficiency measures.</p>	<p>2.2 Identify the types of heating and ventilation systems in the building</p> <p>2.3 Explain the implications of common building defects for energy efficiency measures with specific reference to:</p> <ul style="list-style-type: none"> <li>• damp and causes of dampness</li> <li>• structural defects</li> </ul> <p>2.4 Identify how alterations since the original construction affect the thermal performance of the building.</p>
<b>Additional information about the Unit</b>	
<b>Unit purpose and aim(s)</b>	
<p>This Unit is about recognising traditional buildings, in terms of their age, heritage values and significance, construction, condition and thermal performance, and the implications of these for the introduction of energy efficiency measures.</p>	
<b>Unit expiry date</b> 30/06/2018	
<b>Details of the relationship between the Unit and relevant national occupational standards (if appropriate)</b>	
<p>Developed from Asset Skills National Occupational Standards energy efficiency measures for older and traditional buildings.</p>	
<b>Details of the relationship between the Unit and other standards or curricula (if appropriate)</b>	
N/A	
<b>Assessment requirements specified by a sector or regulatory body (if appropriate)</b>	
<p>If not specifically stated in the assessment information, <b>a plural statement in any Assessment Criteria means a minimum of two.</b></p> <p>AC 1.3 — should include reference to internal and external finishes for walls</p> <p>AC 2.3 — common building defects should include reference to rain penetration, rising damp, internal moisture vapour and damaged services, and salts</p>	
<b>Endorsement of the Unit by a sector or other appropriate body (if required)</b>

## QCF Assessment Specification

### Assessment (evidence) Requirements

The following evidence is required to demonstrate that candidates have the appropriate level of knowledge of the age, nature and characteristics of older and traditional buildings. All Learning Outcomes and Assessment Criteria must be achieved.

Written and/or recorded oral evidence is required for all Learning Outcomes.

### Guidance on Methods/Instruments of Assessment

The Instrument of Assessment for all Learning Outcomes could be portfolio based, short answer written questions/oral response or through inspection reports.

## 2.6 QCF Unit Description & Assessment Specification *continued*

<b>Unit title</b>	<b>Older and Traditional Buildings: Assessing Options for the Introduction of Energy Efficiency Measures</b>
<b>Ofqual Unit code</b>	<b>T/505/3507</b>
<b>SQA Unit code</b>	<b>H6MM 69</b>
<b>SSC Ref</b>	<b>OTB2</b>

### QCF Unit specification

<b>Title</b>	<b>Older and Traditional Buildings: Assessing Options for the Introduction of Energy Efficiency Measures</b>	
<b>Level</b>	<b>3</b>	
<b>Credit Value</b>	<b>1</b>	
<b>Learning Outcomes The Learner will</b>	<b>Assessment Criteria The learner can:</b>	
1 Understand the factors influencing the selection of appropriate energy efficiency measures and materials.	<p>1.1 Assess the implications of existing building defects in relation to the choice of energy efficiency measures.</p> <p>1.2 Interpret the implications of occupant behaviour on proposed energy efficiency measures.</p> <p>1.3 Identify the implications of the relevant legal and regulatory requirements with particular reference to:</p> <ul style="list-style-type: none"> <li>• planning permission</li> <li>• listed building consent</li> <li>• conservation areas</li> <li>• local listing</li> <li>• scheduled monuments</li> <li>• national building regulations</li> </ul> <p>1.4 Outline the technical risks associated with the energy efficiency measures in relation to:</p> <ul style="list-style-type: none"> <li>• thermal bridges (cold bridges)</li> <li>• ventilation</li> <li>• thermal bypass</li> <li>• condensation and interstitial</li> <li>• condensation</li> <li>• alterations in structure</li> <li>• moisture movement</li> </ul> <p>1.5 Assess the impact and consequences of using unsuitable interventions or inappropriate energy performance measures.</p> <p>1.6 Explain the limitations of using default U-values in RdSAP (or approved software) for older and traditional buildings and their impact on the energy rating and recommended energy efficiency measures in the EPC.</p>	
<i>continued</i>		

<b>Learning Outcomes The Learner will</b>	<b>Assessment Criteria The Learner can:</b>
1 Understand the factors influencing the selection of appropriate energy efficiency measures and materials.	1.7 Explain in what circumstances calculated U-values or in-situ measured U-values should be used, the issues to be aware of and appropriate sources or processes to obtain these.
2 Know energy efficiency measures and materials.	<p>2.1 Outline a range of materials and techniques appropriate to older and traditional buildings.</p> <p>2.2 Assess the effects of energy efficiency measures in combination with each other.</p> <p>2.3 Identify when the energy efficiency measures need to be adapted to older and traditional buildings due to:</p> <ul style="list-style-type: none"> <li>• existing building structure</li> <li>• detailing</li> <li>• services</li> <li>• the heritage values and significance of the building</li> <li>• technical risks</li> <li>• cases where energy efficiency measures cannot be recommended</li> </ul>

<b>Additional information about the Unit</b>
<b>Unit purpose and aim(s)</b>
This Unit is about interpreting the options for the introduction of energy efficiency measures, with reference to the characteristics of the specific building, based on an accurate identification and evaluation of insulation, ventilation and building performance factors as well as establishing relevant investigative measures and an evaluation of available information on the building and its thermal performance.
<b>Unit expiry date</b> 30/06/2018
<b>Details of the relationship between the Unit and relevant national occupational standards (if appropriate)</b>
Developed from Asset Skills National Occupational Standards energy efficiency measures for older and traditional buildings.
<b>Details of the relationship between the Unit and other standards or curricula (if appropriate)</b>
N/A
<b>Assessment requirements specified by a sector or regulatory body (if appropriate)</b>
If not specifically stated in the assessment information, <b>a plural statement in any Assessment Criteria means a minimum of two.</b>
AC 1.3 — national building regulations should include reference to any exemptions and special considerations for older and traditional buildings
AC 2.1 — should include reference to at least: vapour permeable and hygroscopic materials & air and vapour control layers

<b>Endorsement of the Unit by a sector or other appropriate body (if required)</b>
N/A
<b>Location of the Unit within the subject/sector classification system</b>

### **QCF Assessment Specification**

<b>Assessment (evidence) Requirements</b>
<p>The following evidence is required to demonstrate that candidates have the appropriate level of knowledge of the age, nature and characteristics of older and traditional buildings. All Learning Outcomes and Assessment Criteria must be achieved.</p> <p>Written and/or recorded oral evidence is required for all Learning Outcomes.</p>
<b>Guidance on Methods/Instruments of Assessment</b>
<p>The Instrument of Assessment for all Learning Outcomes could be portfolio based, short answer written questions/oral response or through inspection reports.</p>

## 2.6 QCF Unit & Assessment Specification *Continued*

<b>Unit title</b>	<b>Older and Traditional Buildings: Making Recommendations and Giving Advice on the Introduction of Energy Efficiency Measures</b>
<b>Ofqual Unit code</b>	<b>R/505/3650</b>
<b>SQA Unit code</b>	<b>H6MN 69</b>
<b>SSC Ref</b>	<b>OTB4</b>

### QCF Unit Specification

<b>Title</b>	<b>Older and Traditional Buildings: Making Recommendations and Giving Advice on the Introduction of Energy Efficiency Measures</b>	
<b>Level</b>	3	
<b>Credit Value</b>	1	
<b>Learning Outcomes</b> <b>The Learner will</b>	<b>Assessment Criteria</b> <b>The Learner can:</b>	
1 Be able to make recommendations and give advice on the introduction of energy efficiency measures in older and traditional buildings	<p>1.1 Review and revise measures from reports or surveys based on:</p> <ul style="list-style-type: none"> <li>• an understanding of the building the range of options available and appropriate to the building</li> <li>• the likely effectiveness and value for money of measures to improve energy performance</li> <li>• the repairs needed prior to the installation of the measures</li> </ul> <p>1.2 Justify the selection of energy efficiency measures including:</p> <ul style="list-style-type: none"> <li>• when the energy efficiency performance of the proposed measure does not meet U-values prescribed in national building regulations</li> <li>• rationale for why energy efficiency measures may, or may not, have been selected</li> <li>• specific design, installation or operational features used to minimise the impact of the chosen energy efficiency measures on the building</li> </ul> <p>1.3 Summarise the suitability of energy efficiency measures selected and their implications.</p> <p>1.3 Explain the requirements for the delivery of the energy efficiency measures including:</p> <ul style="list-style-type: none"> <li>• The packaging and sequencing of measures</li> <li>• Any repairs needed to enable them</li> <li>• Any works needed to protect the building or its features</li> <li>• Any on-going maintenance</li> </ul>	

<b>Additional information about the Unit</b>
<b>Unit purpose and aim(s)</b>
This Unit is about selecting appropriate energy efficiency measures based on a full understanding of the building's current thermal performance and structure. It also involves advising on the installation of the measures and how to maximise thermal performance of the building.
<b>Unit expiry date</b> 30/06/2018
<b>Details of the relationship between the Unit and relevant national occupational standards (if appropriate)</b>
Developed from Asset Skills National Occupational Standards energy efficiency measures for older and traditional buildings.
<b>Details of the relationship between the Unit and other standards or curricula (if appropriate)</b>
N/A
<b>Assessment requirements specified by a sector or regulatory body (if appropriate)</b>
If not specifically stated in the assessment information, <b>a plural statement in any Assessment Criteria means a minimum of two.</b>  AC 1.1 — this could include information from a Green Deal Advice Report, Energy Performance Certificate or other reports or surveys  AC 1.2 — include reference to any exemptions and special considerations for older and traditional buildings
<b>Endorsement of the Unit by a sector or other appropriate body (if required)</b>
N/A
<b>Location of the Unit within the subject/sector classification system</b>

### QCF Assessment Specification

<b>Assessment (evidence) Requirements</b>
The following evidence is required to demonstrate that candidates have the appropriate level of knowledge of the age, nature and characteristics of older and traditional buildings. All Learning Outcomes and Assessment Criteria must be achieved.  Written and/or recorded oral evidence is required for all Learning Outcomes.
<b>Guidance on Methods/Instruments of Assessment</b>
The Instrument of Assessment for all Learning Outcomes could be portfolio based, short answer written questions/oral response or through inspection reports.

## Section 3 Programme Delivery Requirements

### 3.1 Training Resources, Facilities & Venues

As a part of the approval to deliver the training programme, a CITB representative will confirm that the training facilities meet the standards required which include the following;

- Accessible good quality training rooms suitable in size for the number of learners must be provided that includes access for disabled learners
- Hearing loops
- Toilets and domestic facilities
- Break-out areas for group discussions/activities
- Power point projectors & flip charts
- Good levels of classroom illumination, heating & flow of fresh air
- Sufficient up-to-date and approved fire-fighting equipment and high levels of fire protection
- For training programmes that include practical work or demonstration areas, the CITB Guide to Training Facilities must be used to benchmark the size of work areas and equipment required
- Approved training providers will receive relevant power point presentations and the training manual to deliver the programme, but will as required, need to develop their own training notes and training support material.

### 3.2 Qualifications of Trainers & Assessors

Training providers using one or more of the course delivery options described in Section 2.3 must provide suitable staff who can demonstrate their knowledge, expertise and experience in delivering the required training and in the subject matter. In addition, the trainer or lead trainer must be an accredited S/NVQ Assessor and hold the relevant up-to-date and accepted Assessor Award. The accredited trainer/assessor will be responsible for the quality assurance of the training programme and administration of the end test assessment. Suitably qualified independent S/NVQ assessors who have the necessary expertise and experience can also apply to deliver this training programme. In all cases an up-to-date CV must be provided to CITB for all trainers engaged in delivery of the training programme. Honorariums and guest speaks who can provide individual expertise to support delivery of the programme may also be used, pending approval by CITB.

### 3.3 Training Programmes

Training Providers will be responsible for producing training programmes in-line with the SQA Units and Training Objectives and the delivery options described in section 2.3. All Programmes must be documented in Lesson Plan style. An example of a typical two day programme is provided at **Appendix D**.

### 3.4 Trainer Ratios to Trainees

- The maximum number of candidates per course will be **16**
- In cases where practical training sessions are used, the number of learners in any one group must not exceed a maximum of 14 Learners per group, unless a second course tutor is involved.

### 3.5 Course Handbook

All Learners must be issued with the Course Handbook which is designed to provide additional information toward understanding the SQA Units. The Handbook must be issued free of charge as an inclusive part of the course fees.

### 3.6 SQA Learner Registration & Certification

The Course Leader will be responsible for completing the S/VVQ Candidate Registration Forms and the accredited S/NVQ Assessors will be responsible of invigilation and completion of the End Test assessment. CITB National Construction College (NCC) [N/SVQ Accredited Centre] Internal Quality Assurance (IQA) staff will be responsible for the Internal Verification of the Assessment process and compliance with SQA procedures. Approved training organisations will be provided with these procedures and documents separately.

### 3.7 SQA Learner End Assessment & Assignments

CITB will provide Approved Training Providers with a bank of questions based on the programme objectives. End assessments will take the format and time frame requirements set down by the Awarding Organisation. The outcome and certification of the programme/s will be the SQA Level 3 Award for Energy Efficiency Measure for Older and Traditional Buildings (QCF) SQA Code: GJ32 69: Qualification Code 601/2659/0. The following rules shall apply to end assessments and SQA Certification:-

- 1 The overall pass mark in the written end assessment is 80%. Learners who achieve this mark or higher will receive the SQA level 3 Award.
- 2 Learners who achieve less than 80% at the first attempt must be given the opportunity to re-answer the questions they have failed while attending the course and can refer to the course handbook when answering the questions.
- 3 Learners who achieve a score of less than 80% after re-answering the questions they have already failed once must complete a site based assignment devised by the assessor.
- 4 Learners who achieve less than 20% at the first attempt are deemed to have failed the course and must be:-
  - A) Must repeat the course and retake the End Assessment.
  - or
  - B) Directed to complete an on-site Assignment set by the course tutor.

### 3.8 Process Flow Chart & SQA Awarding Body Documentation

Training providers should refer to the process flow chart that sets out the work activities associated with delivering the course and the SQA level 3 Award. Please see **Appendix C**. Training Providers are also required to ensure to the associated S/NVQ Assessment documents that have been agreed with Awarding Body (SQA) and that they are used in the conjunction with the evidence requirements relating to the following:- See example the documents in Appendix F:-

- End Test & Assignments
- Reflective Learning Log
- See Awarding Body Documents in **Appendix F**

### 3.9 Training Provider Applications

Potential training providers must be issued with a Service Level Agreement (SLA) by the appropriate CITB representative in order to deliver the training programme. Training providers and employers should satisfy themselves that the course and mode of delivery offered has been authorised and approved by CITB. Initially organisations who wish to offer the Energy Efficiency & Retrofit of

Traditional (pre-1919) programmes should apply to the address shown and provide their full contact details including name, address, e-mail and contact telephone number.

CITB  
Specialist Projects & Development Team  
Units 1 & 2 Venture House  
674 Melton Road  
Thurmaston  
Leicester

Tel 0300 456 5557

## Section 4 Learner Profiling & Initial Assessment

### 4.1 Knowledge & Skills Scan

Trainers/Assessor must assess learner's current levels of knowledge and experience through initial assessment in order to understand and deliver training that meets each learners needs. This means that previous knowledge and experience should be mapped against the three units in the SQA Level 3 Award. This will also enable the course leader to customise the training programme and estimate potential success rates in SQA End Assessments and identify areas where some learners will be required to complete site based Assignment work.

It is therefore a pre-requisite of the training programme that all learners are provided with the **Knowledge & Skills Scan pro-forma** and for this to be completed and returned to the Training Provider ahead of the training course start date. The document must be used to determine the learner's current level of understanding and experience of working on older buildings in relationship to the requirements of the SQA level 3 Award for Energy Efficiency Measure for Older and Traditional Buildings. Knowledge & Skills Scan must be retained by the Trainer/Assessor for the purpose of Quality Assurance checks by the Awarding Body (SQA)

See **Appendix A** for a copy of the Knowledge & Skills Scan Pro-forma

### 4.2 Additional Information & CVs and Accreditation of Prior Learning (APL)

Training Providers should ensure that each candidate completes a statement outlining their back ground and job role and work experience. This can be in the form of a CV that highlights experience relative to the SQA Level 3 Award.

Linked to Accreditation of Prior Learning (APL) learners are encouraged to document their work experience including that which specifically relates to Energy Efficiency and Retrofit of Traditional (pre-1919) Buildings as part of the. As such this information should be used by the Assessor when considering additional evidence which can go toward achievement of the SQA level 3 Award. All evidence collected by the trainer/assessor must be retained and made available for Internal & External Quality Assurance purposes. **See suggested pro-forma at Appendix B**

### 4.3 Learning Styles, Processes

Trainers are required to focus on active participation by learners along with reflective and interactive teaching styles. Interaction is also encouraged with an emphasis on use of work groups. The nature of the training programme content and Learning outcomes includes work-based assignments where appropriate. Beyond these requirements, the learning experience should reflect the vocational nature of the training in content and skills provision. Wherever possible this should include application of real life situations in addition to the appropriate theoretical principles and knowledge.

## Section 5 Course Training Objectives

### 5.1 Training Objectives Mapped to the SQA Units

SQA Unit H6MK 69 Mapped to Training Module Objectives	
SQA Unit Title Older & Traditional Buildings: Age, Nature and Characteristics	Training Objectives
<p><b>1 Know the age and construction of older and traditional buildings.</b></p> <p><b>1.1</b> Estimate the age of a building.</p> <p><b>1.2</b> Explain the heritage values and significance of older and traditional buildings.</p> <p><b>1.3</b> Identify the materials and construction methods used in older and traditional buildings with specific reference to:-</p> <ul style="list-style-type: none"> <li>• roofs</li> <li>• walls</li> <li>• floors</li> <li>• doors and windows</li> <li>• chimneys and fireplaces</li> </ul> <p><b>1.4</b> Explain how conservation principles are applied to older and traditional buildings.</p> <p><b>1.5</b> Identify local and regional variations of traditional buildings and materials.</p> <p style="text-align: right;"><i>Continued</i></p>	<p><b>1. Illustrate the variations in style and construction of pre 1919 buildings including:-</b></p> <p><b>1.1</b> Architectural styles over time including Tudor, Georgian, Victorian and Edwardian etc. and the characteristics of these buildings:-</p> <p><b>1.2</b> Consideration of the chronology of building styles over time including:-</p> <ul style="list-style-type: none"> <li>• Walls, Roofs, Floors, Openings.</li> <li>• The changing structure of roofs including timber and metal elements Changing masonry types over time</li> </ul> <p><b>1.3</b> Illustrate the range of materials used in traditional buildings in the following:</p> <ul style="list-style-type: none"> <li>• Different masonry types including brick, rubble and ashlar</li> <li>• Lime and earth mortars</li> <li>• Traditional renders and surface finishes</li> <li>• Earth construction methods</li> <li>• How to differentiate between solid stone and brick walls and those which are likely to be of modern, cavity construction</li> <li>• Internal wall linings including lath and plaster, plaster on the hard and traditional</li> <li>• Stone, Slate &amp; Thatch &amp; Metal Roofs including Lead coverings and Sarking Boards</li> </ul> <p><b>1.4</b> Make reference Understand the Repair &amp; Maintenance of Traditional Buildings (Ref QCF 546) Also outline principles governing the following:-</p> <ul style="list-style-type: none"> <li>• Conservation &amp; Restoration</li> <li>• Minimal intervention</li> <li>• Maintenance</li> <li>• Authenticity&amp; Understanding Significance</li> </ul> <p><b>1.5</b> Illustrate Vernacular buildings and give examples of the materials used regionally.</p> <p style="text-align: right;"><i>Continued</i></p>

<b>SQA H6MK 69 Unit Title Older &amp; Traditional Buildings: Age, Nature and Characteristics.</b> <i>Continued</i>	<b>Training Objective</b> <i>Continued</i>
<p><b>1.6</b> Clarify the circumstances where referral to a specialist or recommendation for further analysis or investigation would be appropriate.</p>	<p><b>1.6</b> Explain the roles of Specialists Occupations &amp; Organisations involved in determining the correct approaches to the installation of Energy Efficiency measures available:-</p> <ul style="list-style-type: none"> <li>• Specialist Architects &amp; Conservation Officers</li> <li>• SPAB,STBA</li> <li>• The UK Heritage Bodies.</li> <li>• Specialist Researchers &amp; Reports</li> </ul> <p>See <b>Appendix E</b> for Reference information</p>
<p><b>2 Be able to identify the factors which influence how older and traditional buildings perform and the implications for the introduction of energy efficiency measures.</b></p> <p><b>2.1</b> Identify the way older and traditional buildings perform with specific reference to:-</p> <ul style="list-style-type: none"> <li>• how the performance of traditionally constructed buildings differs to modern construction</li> <li>• the breathability and permeability characteristics of traditional building fabric</li> <li>• the geographical location, aspect, orientation and the differing exposure of individual elevations</li> </ul> <p><b>2.2</b> Identify the types of heating and ventilation systems in the building.</p> <p><b>2.3</b> Explain the implications of common building defects for energy efficiency measures with specific reference to:</p> <ul style="list-style-type: none"> <li>• damp and causes of dampness</li> <li>• structural defects</li> </ul> <p><i>Continued</i></p>	<p><b>2.1</b> Provide definitions of the following terms and understanding of how they relate to and in the context of the fabric of traditional buildings</p> <ul style="list-style-type: none"> <li>• Breathability</li> <li>• Hygroscopicity</li> <li>• Vapour permeability</li> <li>• Capillarity</li> <li>• Surface condensation</li> <li>• Interstitial condensation</li> </ul> <p>Also describe and illustrate the movement of moisture in and out of traditional fabric and ways in which this movement can be disrupted and the implication of this. Include illustrations that show the impact on the orientation/ location of the building and weather patterns and the environment.</p> <p><b>2.2</b> Provide information on traditional heating systems such as coal act and current systems:</p> <ul style="list-style-type: none"> <li>• The range of Heating Systems e.g. unvented/vented</li> <li>• Ground Source Heat Pumps</li> <li>• Simple Ventilation and Mechanical Systems</li> </ul> <p><b>2.3</b> Explain ways moisture can enter traditional fabric both externally and internally including consideration of the following:</p> <ul style="list-style-type: none"> <li>• Internal &amp; External Wall Insulation Systems</li> <li>• Rain water ingress</li> <li>• Excess moisture from building defects</li> <li>• Internal moisture from habitation</li> <li>• Illustrate the impact and structural defects</li> </ul> <p><i>Continued</i></p>

<p><b>2.4</b> Identify how alterations since the original construction affect the thermal performance of the building.</p>	<p><b>2.4</b> Demonstrate ways in which energy efficiency improvements can affect performance of Traditional Buildings including:-</p> <ul style="list-style-type: none"> <li>• Impermeable renders and roofing felt</li> <li>• Vapour barriers fitted to walls, floors and roofs</li> <li>• Cement Renders</li> <li>• Modern Internal wall linings including plaster board</li> <li>• Roof coverings including pa</li> <li>• Sash and casement windows</li> <li>• Double Glazing Options</li> <li>• Traditional doors</li> </ul>

SQA Unit Older and Traditional Buildings: Assessing Options for the Introduction of Energy Efficiency Measures	Training Objectives
<p><b>1 Understand the factors influencing the selection of appropriate energy efficiency measures and materials.</b></p> <p><b>1.1</b> Assess the implications of existing building defects in relation to the choice of energy efficiency measures.</p> <p><b>1.2</b> Interpret the implications of occupant behaviour on proposed energy efficiency measures.</p> <p><b>1.3</b> Identify the implications of the relevant legal and regulatory requirements with particular reference to:</p> <ul style="list-style-type: none"> <li>• planning permission</li> <li>• listed building consent</li> <li>• conservation areas</li> <li>• local listing</li> <li>• scheduled monuments</li> <li>• national building regulations</li> </ul> <p style="text-align: right;"><i>Continued</i></p>	<p><b>1 Understand the role of the Building Regulations in setting energy efficiency standards for traditional pre-1919 dwellings, including</b></p> <p><b>1.1</b> Building Regulations compliance requirements for the thermal upgrade of traditional and historic pre-1919 dwellings including the following:-</p> <ul style="list-style-type: none"> <li>• Methodologies, critical data requirements and assumptions of Standard Assessment Procedure (SAP), Reduced data Standard Assessment Procedure (RdSAP) and Energy Performance Certificates (EPCs) in relation to traditional pre-1919 dwellings</li> <li>• Principles of U-values, thermal bridging and thermal mass</li> <li>• Identify the assumed and actual U-values for certain construction elements of traditional pre-1919 dwellings</li> <li>• Key factors that may lead to a gap between predicted and actual energy performance</li> </ul> <p><b>1.2</b> Illustrate the energy performance of traditional buildings in relationship to the usage by the occupants and identify the impact of behaviours.</p> <p><b>1.3</b> Provide information on the items listed opposite in relationship to the following Building Regulations documents:-</p> <ul style="list-style-type: none"> <li>• Summary of requirements for new dwellings (Approved Document L1A)</li> <li>• Summary of requirements for existing dwellings (Approved Document L1B)</li> <li>• Exemptions for listed buildings</li> <li>• ‘Special consideration’ categories</li> <li>• U-value standards for renovated / retained thermal elements</li> <li>• Approved Document L1B Appendix 1 – reference to flexibility in standards and achieving best standards possible</li> </ul> <p style="text-align: right;"><i>Continued</i></p>

SQA Unit Older and Traditional Buildings: Assessing Options for the Introduction of Energy Efficiency Measures	Training Objectives
<p><b>1.4</b> Outline the technical risks associated with the energy efficiency measures in relation to:</p> <ul style="list-style-type: none"> <li>• thermal bridges (cold bridges)</li> <li>• ventilation</li> <li>• thermal bypass</li> <li>• condensation and interstitial</li> <li>• alterations in structure</li> <li>• moisture movement</li> </ul> <p><b>1.5</b> Assess the impact and consequences of using unsuitable interventions or inappropriate energy performance measures.</p> <p><b>1.6</b> Explain the limitations of using default U-values in RdSAP (or approved software) for older and traditional buildings and their impact on the energy rating and recommended energy efficiency measures in the EPC</p> <p><b>1.7</b> Explain in what circumstances calculated U-values or in-situ measured U-values should be used, the issues to be aware of and appropriate sources or processes to obtain these.</p> <p><b>2 Know energy efficiency measures and materials</b></p> <p><b>2.1</b> Outline a range of materials and techniques appropriate to older and traditional buildings.</p> <p><b>2.2</b> Assess the effects of energy efficiency measures in combination with each other.</p> <p style="text-align: right;"><i>Continued</i></p>	<p><b>1.4</b> List the potential results and possible unintended consequences of the installation of measures in relation to the following:</p> <ul style="list-style-type: none"> <li>• Moulds &amp; Spores and the impact on the health of occupants</li> <li>• Unsuitable ventilation systems and potential risks</li> <li>• The impact of dampness on structural components such as walls, floor and roof timbers</li> <li>• The impact on the structure of the building by the introduction of EE measures. E.g. Solar Panels etc.</li> </ul> <p><b>1.5</b> Explain the impact on:-</p> <ul style="list-style-type: none"> <li>• Energy Bills/Fuel Poverty/ECO</li> <li>• The ascetics of the building and the environment</li> <li>• Financial Implications of replacement systems</li> </ul> <p><b>1.6</b> Explain how U Values are calculated and how RDSAP is used in the assessment of older traditional buildings leading to the issue of the EPC. Describe how the how the energy rating is determined.</p> <p><b>1.7</b> Utilise Case studies to illustrate and explain issues highlighted in UK Heritage Technical Papers relative to the measurement of the building energy performance.</p> <p><b>2. Illustrate with images and drawings the range of energy efficiency measures available in the context of pre 1919 traditional buildings.</b></p> <p><b>2.1</b> Illustrate examples of Solar, External and Internal Render systems available.</p> <ul style="list-style-type: none"> <li>• Illustrate the (approx.) 45No energy efficiency measures available to businesses and house holders.</li> </ul> <p><b>2.2</b> Present examples of EE measures that have been installed in relationship to their compatibility: i.e.</p> <ul style="list-style-type: none"> <li>• EWI Systems and double glazing</li> <li>• IWI Systems and Damp Penetration</li> <li>• Draft Proofing and Ventilation requirements.</li> </ul> <p style="text-align: right;"><i>Continued</i></p>

<b>SQA Unit Older and Traditional Buildings: Assessing Options for the Introduction of Energy Efficiency Measures</b> Continued	<b>Training Objectives</b>
<p><b>2.3</b> Identify when the energy efficiency measures need to be adapted to older and traditional buildings due to:</p> <ul style="list-style-type: none"> <li>• existing building structure</li> <li>• detailing</li> <li>• services</li> <li>• the heritage values and significance of the building</li> <li>• technical risks</li> <li>• cases where energy efficiency measures cannot be recommended</li> </ul>	<p><b>2.3</b> Describe how conservation practice relates to installation of energy efficiency improvements in the context of the following and describe how they relate to one another:-</p> <ul style="list-style-type: none"> <li>• Conservation,</li> <li>• Restoration</li> <li>• Repair and maintenance</li> </ul> <p>Description of the following conservation principles:</p> <ul style="list-style-type: none"> <li>• Minimal intervention</li> <li>• Like for like materials</li> <li>• Conserve as found / retention of original fabric</li> <li>• Reversibility</li> <li>• Documentation</li> <li>• Legibility</li> <li>• Respect for age and patina</li> </ul> <p><b><i>Set Discussion Groups to determine what it means for a building to be listed and the additional planning requirements necessary in the case of the following making reference to specific energy measures in relationship to:-</i></b></p> <ul style="list-style-type: none"> <li>• Conservation areas</li> <li>• National Parks</li> <li>• Listed Buildings</li> </ul>

SQA Unit Older & Traditional Buildings: Making Recommendations & Giving Advice on the Introduction of Energy Efficiency Measures	Training Objectives
<p><b>1 Be able to make recommendations and give advice on the introduction of energy efficiency measures in older and traditional buildings</b></p> <p><b>1.1</b> Review and revise measures from reports or surveys based on:</p> <ul style="list-style-type: none"> <li>• an understanding of the building the range of options available and appropriate to the building</li> <li>• the likely effectiveness and value for money of measures to improve energy performance</li> <li>• the repairs needed prior to the installation of the measures</li> </ul> <p><b>1.2</b> Justify the selection of energy efficiency measures including:</p> <ul style="list-style-type: none"> <li>• when the energy efficiency performance of the proposed measure does not meet U-values prescribed in national building regulations</li> <li>• rationale for why energy efficiency measures may, or may not, have been selected</li> <li>• specific design, installation or operational features used to minimise the impact of the chosen energy efficiency measures on the building</li> </ul> <p><b>1.3</b> Summarise the suitability of energy efficiency measures selected and their implications.</p> <p><b>1.4</b> Explain the requirements for the delivery of the energy efficiency measures including:-</p> <ul style="list-style-type: none"> <li>• The packaging and sequencing of measures</li> <li>• Any repairs needed to enable them</li> <li>• Any works needed to protect the building or its features</li> <li>• Any on-going maintenance</li> </ul>	<p><b>1 Provide an overview and illustrate a range of common energy efficiency measures currently in use. Reference the following:</b></p> <ul style="list-style-type: none"> <li>• The definition of Fuel Poverty</li> <li>• Define ECO</li> <li>• Outline the Green Deal and its recent demise</li> <li>• Present a list of all 45 EE measures available.</li> </ul> <p><b>1.1</b> Outline the features of a Survey Report and the processes involved in establishing the report and projected EPC focussing on pre 1919 building to illustrate:- The impact on the fabric and appearance of the building</p> <ul style="list-style-type: none"> <li>• Cost savings versus capital expenditure</li> <li>• Examples showing the need for remedial work prior to the installation of EE Measures.</li> </ul> <p><b>1.2</b> Explain circumstances and provide examples where the outputs from the energy efficiency measures installed fall short of the expected performance and EPC ratings relating to:-</p> <ul style="list-style-type: none"> <li>• Consideration of the alternative measures available at the time or as a solution to a problem</li> <li>• Cost versus investment.</li> <li>• Suitability of Energy Efficiency measures in the context of the building and the environment.</li> <li>• Poor installation of the Energy Efficiency measures and competence of the installer/s</li> </ul> <p><b>1.3</b> Illustrate examples of good and bad practice concerning the following in the context of pre 1919 buildings including:-</p> <ul style="list-style-type: none"> <li>• Examples of successful EE measures installed</li> <li>• Illustrations that demonstrate best practice</li> </ul> <p><b>1.4</b> Provide information on examples of energy efficiency on</p> <ul style="list-style-type: none"> <li>• Preparing for the installation of measures</li> <li>• Access to the works and protection of the building and safety issues including risk assessments</li> <li>• Considerations concerning occupiers</li> <li>• Access for on-going maintenance and maintenance schedules</li> <li>• The costs of on-going servicing/ maintenance.</li> </ul>

## 5.2 Training Objective Minimum Delivery Times

The table below illustrates the minimum duration for delivery of the 2 day programme which comprises of at least 6 hours of class contact time on each of the days. This excludes all breaks taken during the course. The table below shows the pattern of delivery to be followed. It is the responsibility of the training provider or course tutor to ensure that the training objectives are covered over the (12) sessions. It is expected that the final Sessions at the end of each day will be used to complete SQA end assessments.

Day One			Day Two		
Session Number	Timing	Duration Hours	Session Number	Timing	Duration Hours
1	9:00 - 10:00	1.00	7	9:00 - 10:00	1.00
Break	10:00 - 10:15	-	Break	10:00 - 10:15	-
2	10:15 - 12:30	2.25	8	10:15 - 12:30	2.25
Lunch	12:30 - 1:30	-	Lunch	12:30 - 1:30	-
3	1:30 - 2:00	0.5	9	1:30 - 2:00	0.5
4	2:00 - 3:00	1:00	10	2:00 - 3:00	1:00
Break	3:00 - 3:15	-	Break	3:00 - 3:15	-
5	3:15 - 4:00	0.75	11	3:15 - 4:00	0.75
6	4:00 - 4:30	0.5	12	4:00 - 4:30	0.5
<b>Total Class Contact Time</b>		<b>6 Hours</b>	<b>Total Class Contact Time</b>		<b>6 Hours</b>

It is acknowledged that for 3 and 5 day courses that the above patterns will be subject to change. It is however the responsibility of the approved training provider to submit a training programme that ensures coverage of the course training objectives to the CITB staff member responsible for the programme. **Appendix D** provides an example of the 2 day programme.

## 5.3 SQA Units & Training Durations

SQA Unit Older & Traditional Buildings: Age, Nature and Characteristics	Study Areas	Minimum Duration
1.1 Estimate the age of a building.	Understanding the chronology, building styles, age and characteristics of Traditional (pre-1919) buildings  Understanding how the thermal performance and energy and efficiency of Traditional (pre-1919) Buildings are assessed.  Understanding the range of available energy efficiency systems and measures available	<b>4 Hours</b>
1.2 Explain the heritage values and significance of older and traditional buildings.		
1.3 Identify the materials and construction methods used in older and traditional buildings with specific reference to		
1.4 Explain how conservation principles are applied to older and traditional buildings		
1.5 Identify local and regional variations of traditional buildings and materials		
1.6 Clarify the circumstances where referral to a specialist or recommendation for further analysis or investigation would be appropriate.		
2.1 Identify the way older and traditional buildings perform		
2.2 Identify the types of heating and ventilation systems in the building.		
2.3 Explain the implications of common building defects for energy efficiency measures with specific reference to:		

<b>SQA Unit Assessing Options for the Introduction of Energy Efficiency Measures</b>	<b>Study Areas</b>	<b>Minimum Duration</b>
1.1 Assess the implications of existing building defects in relation to the choice of energy efficiency measures.	<p>Understanding how the thermal performance and energy and efficiency of Traditional (pre-1919) Buildings are assessed.</p> <p>Understanding the impact of the Installation of retrofit of energy efficiency measures to Traditional (pre-1919) Buildings and Installation of Energy Efficiency Measures in relationship to Craft Occupations.</p>	<b>5 Hours</b>
1.2 Interpret the implications of occupant behaviour on proposed energy efficiency measures.		
1.3 Identify the implications of the relevant legal and regulatory requirements with particular reference to		
1.4 Outline the technical risks associated with the energy efficiency measures in relation to:		
1.5 Assess the impact and consequences of using unsuitable interventions or inappropriate energy performance measures.		
1.6 Explain the limitations of using default U-values in RdSAP (or approved software) for older and traditional buildings and their impact on the energy rating and recommended energy efficiency measures in the EPC		
1.7 Explain in what circumstances calculated U-values or in-situ measured U-values should be used, the issues to be aware of and appropriate sources or processes to obtain these.		
2.1 Outline a range of materials and techniques appropriate to older and traditional buildings.		
2.2 Assess the effects of energy efficiency measures in combination with each other.		
2.3 Identify when the energy efficiency measures need to be adapted to older and traditional buildings		
<b>SQA Making Recommendations &amp; Giving Advice on the Introduction of Energy Efficiency Measures</b>	<b>Study Areas</b>	<b>Minimum Duration</b>
Review and revise measures from reports or surveys	<p>Understanding the range of available energy efficiency systems and measures available</p>	<b>3 Hours</b>
Justify the selection of energy efficiency measures		
Summarise the suitability of energy efficiency measures selected and their implications		
Explain the requirements for the delivery of the energy efficiency measures

**Energy Efficiency & Retrofit of Pre 1919 Traditional Buildings  
Learner Knowledge & Skills Scan**

This Knowledge & Skill Scan must be completed as part of the training & certification programme and is designed ensure the overall training provided is at a level which meets the needs of the learner. Therefore please tick the appropriate boxes to indicate your current knowledge in the subject areas listed below. The completed form should be emailed to your course tutor at least one week before commencement of the first day of training. This may result in your tutor directing you towards some pre course reading or to undertake an exercise. Where appropriate, learners may also submit details of other related knowledge on the APL Forms provided below.

**Learner Occupation**.....

**Learner Name**.....**date**.....

**Please tick the appropriate boxes to indicate the areas of knowledge you currently possess.**     **v**

<b>SQA Unit H6MK 69 Older and Traditional Buildings: Age, Nature and Characteristics</b>		<b>yes</b>	<b>not sure</b>	<b>no</b>
1 Know the age and construction of older and traditional buildings.	Estimate the age of a building.			
	Explain the heritage values and significance of older and traditional buildings.			
	Identify the materials and construction methods used in older and traditional buildings with specific reference to: <ul style="list-style-type: none"> <li>• roofs</li> <li>• walls</li> <li>• floors</li> <li>• doors and windows</li> <li>• chimneys and fireplaces</li> </ul>			
	Explain how conservation principles are applied to older and traditional buildings.			
	Identify local and regional variations of traditional buildings and materials.			
	Clarify the circumstances where referral to a specialist or recommendation for further analysis or investigation would be appropriate.			
2 Be able to identify the factors which Influence how older and traditional buildings perform and the implications for the introduction of energy efficiency measures.	Identify the way older and traditional buildings perform with specific reference to: <ul style="list-style-type: none"> <li>• how the performance of traditionally constructed buildings differs to modern construction</li> <li>• the breathability and permeability characteristics of traditional building fabric</li> <li>• the geographical location, aspect, orientation and the differing exposure of individual elevations</li> </ul>

*Learners can record any existing knowledge, previous experience or qualifications they have in the sections below in relationship to the Energy Efficiency of Pre 1919 Buildings as additional evidence to support the achievement of the SQA Award.*

<b>Understanding the Chronology, Building Styles, Age &amp; Characteristics of Traditionally Constructed Pre-1919 Buildings</b>	
<b>Understanding how the Thermal Performance &amp; Energy Efficiency of Pre 1919 Buildings are assessed</b>	
<b>Understanding the Impact of the Installation of Retrofit Energy Efficiency Measures to Pre 1919 Traditional Buildings</b>	
<b>Understanding the Range Installation of Energy Efficient Systems to Pre-1919 buildings</b>	
<b>The Installation of Energy Efficiency Measures in Relationship to Craft Occupations</b>	
Roof Slating and Tiling	
Lead Work	
Solid Wall Construction including stone, brick, block, earth etc.	
Carpentry and Joinery including structural timber	
Plastering solid or fibrous	

**The Installation of Energy Efficiency Measures in Relationship to Craft Occupations**

Glazing

Wall and Floor tiling

**Declaration of Applicant**

I submit this form and additional documentation as an accurate record in support of my initial assessment. I agree to accept the decision of the tutor in determining my profile and training needs.

Signature of applicant: \_\_\_\_\_

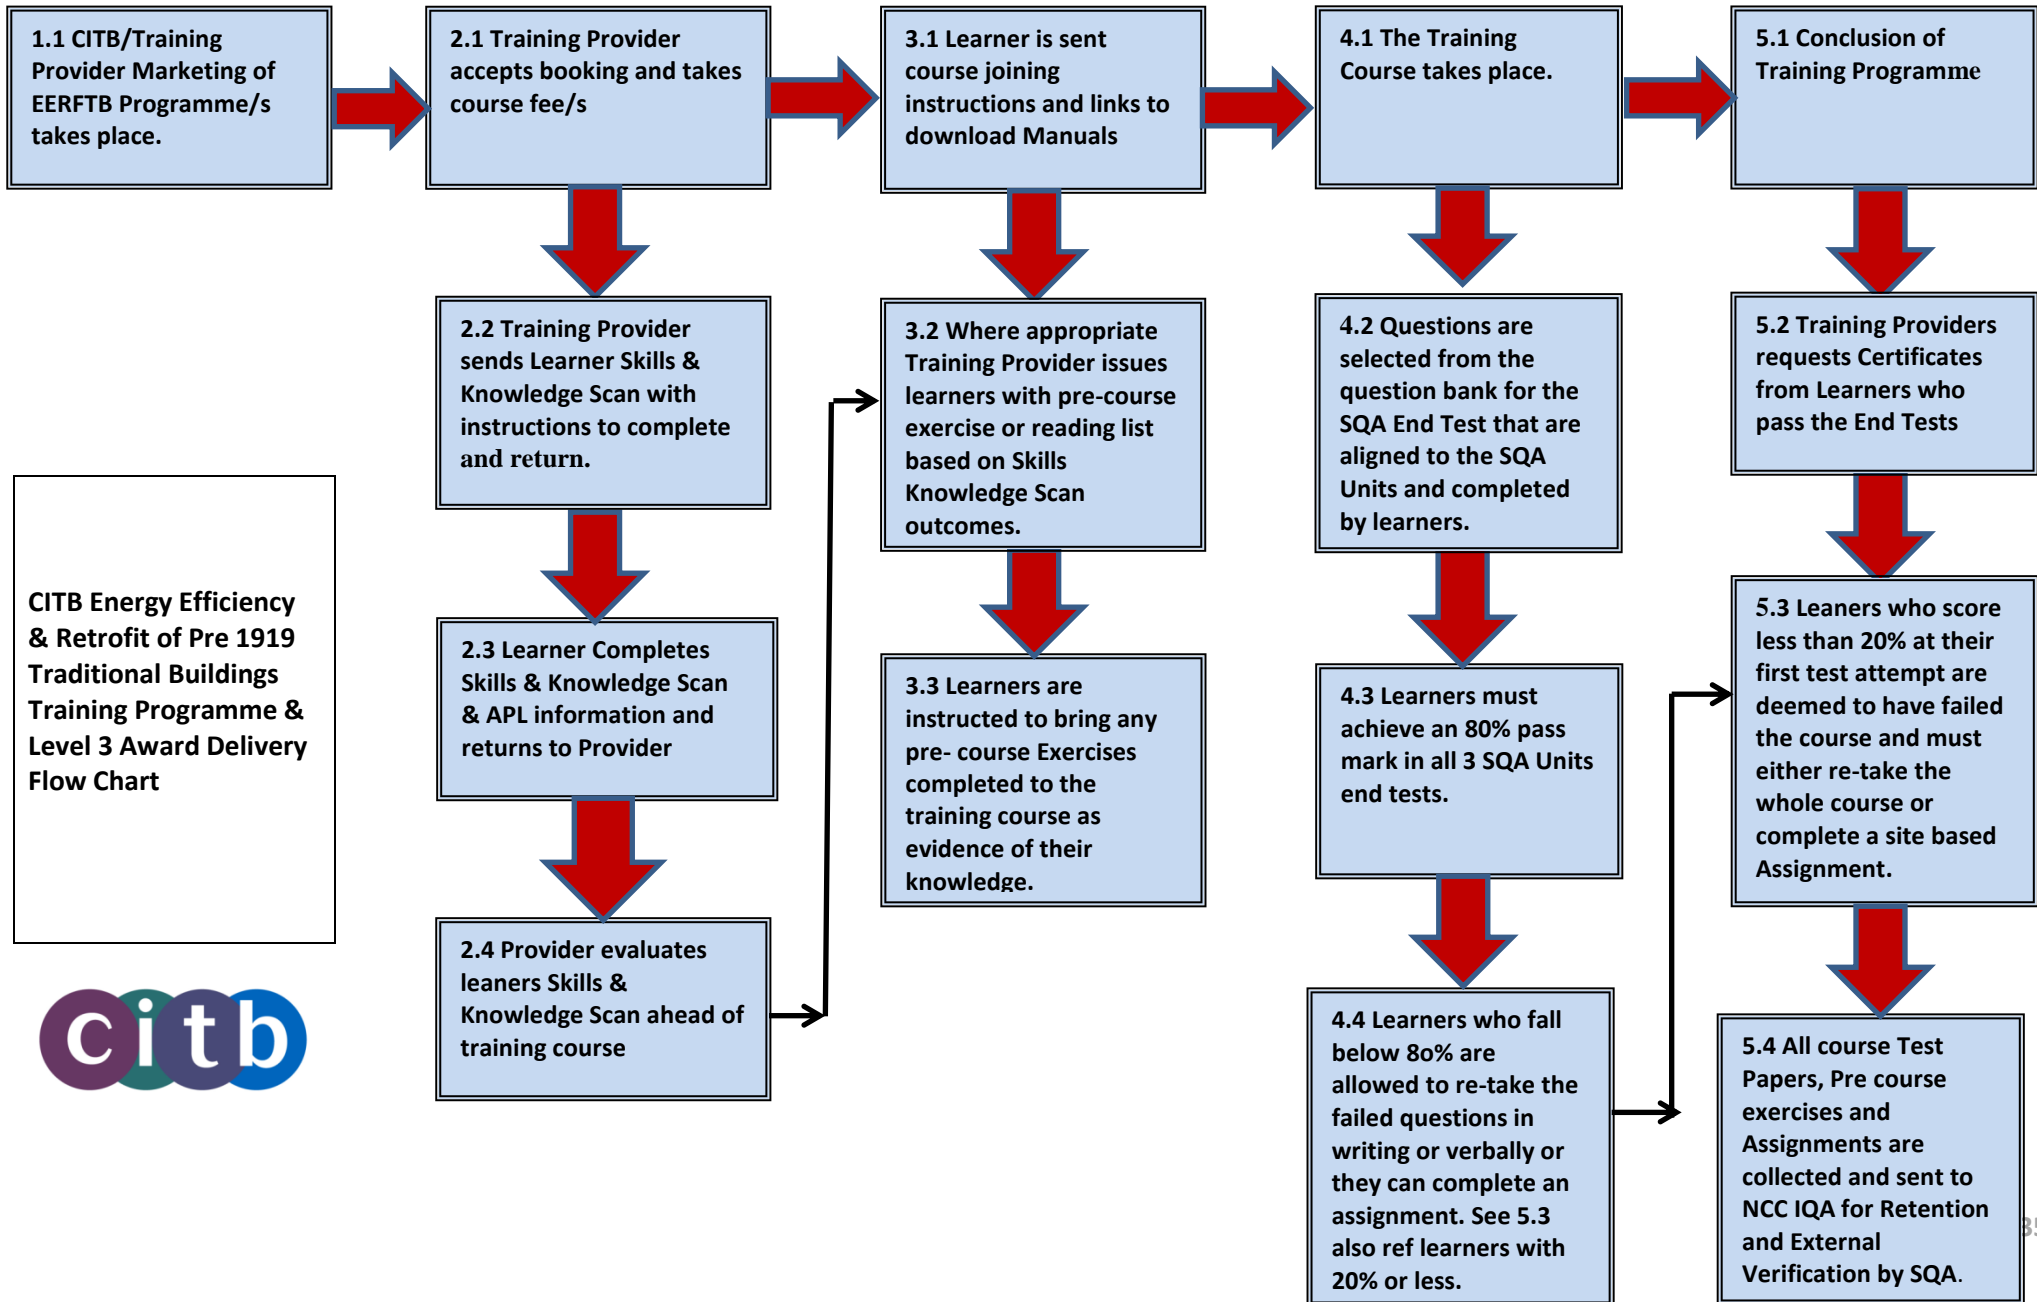

Date: \_\_\_\_/\_\_\_\_/\_\_\_\_

**Disclosure — Data Protection Act 1984**

In compliance with the Data Protection Act, we must point out that the information on this form will be kept on a database. —

Appendix C

Process Flow Chart

CITB Energy Efficiency & Retrofit of Pre 1919 Traditional Buildings Training Programme & Level 3 Award Delivery Flow Chart

## Appendix D

## 2 Day Programme

Day 1					
Time	Presenter	Learning Objectives	Key Points	Resources	Delegate Activities
9.00		<p>Introduction &amp; Overview to the 2 Day Programme etc.</p> <p><b>Explain SQA Modules &amp; Assessments</b></p> <p>Overview of the current issues surrounding Energy Efficiency Retrofit Market,</p>	<ul style="list-style-type: none"> <li>• Skills &amp; Knowledge Scan Feedback</li> <li>• SQA Qualification &amp; Registration</li> <li>• Overview of the three SQA Units,</li> <li>• End Assessments, Assignments</li> <li>• Overview of Course manuals</li> <li>• The discontinuation of the Green Deal</li> <li>• ECO</li> <li>• Approved Installer Requirements( QCF, Aligned Training Programmes, Competent Worker Schemes and Manufacturer Training</li> <li>• Roles of others including surveyors, architects, engineers, project managers &amp; supervisors.</li> </ul>	<p>Power points</p> <p><b>SQA Reg Forms</b></p> <p><b>Skill Scan Form</b></p> <p><b>Course Manuals</b></p>	<b>Completion of any SQA Paper work</b>
10.00		<p><b>SQA Unit H6MK 69</b></p> <p>Understanding the Chronology, Building Styles and Age characteristics of Traditional Buildings</p>	<ul style="list-style-type: none"> <li>• Outline Unit Requirements &amp; Assessment Criteria</li> <li>• Conservation Practice &amp; Philosophy</li> <li>• Basic Principals of Conservation &amp; Appreciation of Heritage Conservation &amp; Values</li> </ul>	<p>Power Points</p> <p>Videos</p> <p><b>Course Manual</b></p>	
10:00 10:15	<b>Break</b>				
10.15		<p>Traditional Construction Methods</p>	<ul style="list-style-type: none"> <li>• Vernacular Buildings</li> <li>• Walls, Roofs, Floors Openings</li> <li>• Moisture Movement, Thermal performance, Ventilation, Maintenance,</li> </ul>	<p>Power Points</p> <p>Case Studies</p> <p>Videos</p>	
12.30 1.30	<b>Break</b>				

Time	Presenter	Learning Objectives	Key Points	Resources	Delegate Activities
1.30		Understanding how the Thermal Performance & Energy Efficiency of Pre 1919 Traditional Building is assessed	<ul style="list-style-type: none"> <li>• Reduce Data Standard Assessment Procedures (RdSAP)</li> <li>• Methods for Monitoring the Thermal Performance of Traditional Buildings</li> </ul>	<b>Course Manuals</b> Power Points Videos Case Studies Hand outs	
3.00 3.15	Break				
3:15		The Installation of EE measures in relationship to Craft Occupations	<ul style="list-style-type: none"> <li>• Roof Slating &amp; Tiling</li> <li>• Lead Work</li> <li>• Solid Wall Construction including, stone, brick, earth, etc.</li> <li>• Carpentry &amp; Joinery including structural timber</li> <li>• Plastering (solid &amp; fibrous)</li> <li>• Glazing</li> <li>• Wall &amp; Floor Tiling</li> </ul>	<b>Course Manuals</b> Power Points Videos Case Studies Hand outs	
4.00		Summary of Days Topics and Questions on the issues covered:	<ul style="list-style-type: none"> <li>• <b>Completion of SQA Module End Assessment/Test</b></li> </ul>	Test Paper	<b>Completion of SQA End Tests</b>
4.30	Close				

Day 2					
Time	Presenter	Learning Objectives	Key Points	Resources	Delegate Activities
9.30		The Installation of EE measures in relationship to Craft Occupations	<ul style="list-style-type: none"> <li>• Roof Slating &amp; Tiling</li> <li>• Lead Work</li> <li>• Solid Wall Construction including, stone, brick, earth, etc.</li> <li>• Carpentry &amp; Joinery including structural timber</li> <li>• Plastering (solid &amp; fibrous)</li> <li>• Glazing</li> <li>• Wall &amp; Floor Tiling</li> </ul>		
11:00	<b>Break</b>				
11.15		<b>Understanding the impact of the Installation of Retrofit of Energy Efficiency Measure</b>	<ul style="list-style-type: none"> <li>• Understanding the application of Insulation Systems to Solid Walls &amp; Solid Masonry: (External and Internal Wall Insulation).</li> <li>• Cavity Walls/Spaces.</li> <li>• Historic Heavy Timber.</li> <li>• Earth Walls.</li> <li>• Solid Flooring.</li> <li>• Insulation Range of Types of Windows and Associated Furniture.</li> <li>• Draft Proofing</li> <li>• Ventilation Systems</li> <li>• Insulation of External Doors.</li> <li>• Suspended Timber Floor Insulation. Roofs.</li> </ul>		
12.30	Lunch				
1.30		<b>Understanding the Range of Energy Efficiency Measures</b>	Overview of available Measures Identify and understand individual measures	Power Points Videos	
2.45	Break				

Day 2 continued					
Time	Presenter	Learning Objectives	Key Points	Resources	Delegate Activities
3.00		<b>STBA: Guidance Wheel,</b>  <b>Moisture Risk Assessment</b>  <i>Overview of Risk Assessments on Older Traditional Buildings</i>  <i>Sources of Advice and Guidance</i>	<ul style="list-style-type: none"> <li>• Accessing and using the Guidance Wheel and Guidance Wheel Reports</li> <li>• <b>Understanding Moisture Risk Assessment</b></li> <li>• <b>Planning Responsible Retrofit of Traditional Buildings</b></li> </ul>	Internet Access Power Points  STBA Publications  STBA Publications	Delegates may need their lap tops
4.00		Course summary & assessment and close  Assignment Instructions to Candidates where appropriate	<ul style="list-style-type: none"> <li>• <i>Completion of Modules End Assessment</i></li> <li>• <i>Set Assignments where appropriate</i></li> </ul>	<i>End Test papers &amp; Assignments</i>	<i>Completion of SQA Module End Tests 2 &amp; 3</i>
4.30	Close
